- Must be willing to submit to a physical, a drug test and a background check.

Job Description: The San Diego office of URS Corporation is looking for Civil Engineers to assist geotechnical project managers with technical and administrative duties.

Duties will include supervision of geotechnical exploration activities, review of laboratory test data, engineering calculations, and report preparation. Engineering calculations may include bearing capacity, settlement, liquefaction, slope stability, and lateral resistance analyses. Knowledge of LPILE and SLOPE/W computer programs desirable. Candidate may also monitor the construction of foundations. The monitoring will be to ensure that the materials and workmanship at the job site meet the standards required by the engineering plans and specifications. Will need good communication skills to communicate with construction and supervisory personnel on the site. Will prepare daily reports regarding the construction activities at the site. Will perform work under the supervision of engineering geologists and geotechnical engineers
