Faculty / Program Director Position
Master’s Degree Program in Construction and Infrastructure Management

The Department of Civil, Environmental and Ocean Engineering seeks candidates for a full-time faculty position as director of the Master’s degree program in construction and infrastructure management. The faculty member will manage and direct the program, advise students, teach and develop graduate courses, and engage in professional service within Stevens. The position may be either tenure-track or non-tenure track, depending on the qualifications and interests of the candidate.

The qualifications for the tenure-track position with a title of assistant or associate professor include a Ph.D. degree in Civil Engineering or closely related field and a record of performance in research and scholarly publication. This candidate will also be expected to develop a high-quality, externally funded research program, supervise student research, and publish papers in scholarly, peer-reviewed journals.

The qualifications for the non-tenure track position with the title of industry professor include a relevant master’s degree and significant industry experience. Experience in an academic environment would be a plus.

Candidates who are licensed as a professional engineer are preferred. We are especially interested in exceptional candidates with interests in emerging technologies and approaches for the integrated design and construction of sustainable buildings and infrastructure. Candidates should have a passion for educating leaders in the civil engineering and construction industry and for building connections between Stevens and industry.

The CEOE Department has an undergraduate enrollment of over 200 students, almost 70 full time MS and PhD students and two very active research centers. Candidates are encouraged to visit the Department homepage http://www.stevens.edu/ses/ceoe/. Stevens is located in a beautiful park-like setting on the Hudson River directly across from New York City. Faculty members have opportunities for academic and industrial collaboration and for participation in the rich intellectual life of the New York City area.

Applications will be considered until December 3, 2013. Applicants should email (in a single PDF) their cover letter, curriculum vitae, a vision statement for their career plan covering the next several years (including a statement of teaching interests and philosophy, and a statement of research interests and goals in the case of the tenure-track position), and a list of three references (with their address, e-mail and phone numbers) to: www.apply2jobs.com/stevens.

Stevens Institute of Technology is an Equal Opportunity Employer. Stevens is building a diverse faculty, staff and student body and strongly encourages applications from female and minority candidates as well as veterans and individuals with disabilities.
